

# Energy data for policy making Benefits and focus for short and long-term

Erica Robin - Head of Section - Oil and Natural Gas Statistics - IEA Energy Data Transparency Workshop - 30 April 2019, Cape Town

# Evidence based policy making

- Important to understand
  - Why policy makers demand information
  - The political and complex policy making context in which they operate

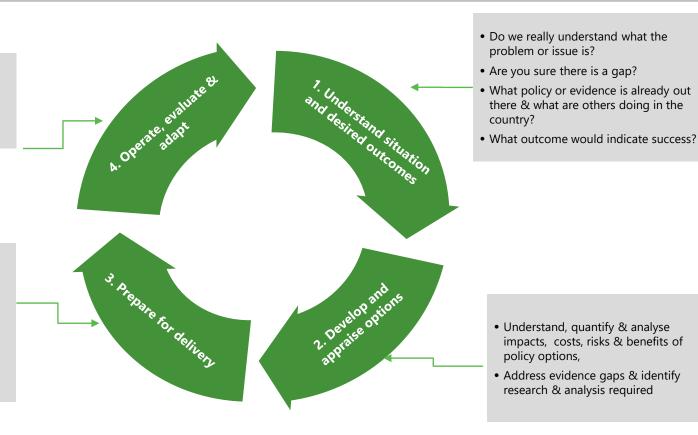

- Produce evidence-based strategies
  - How the world works and not how we would like it to work
  - Assessment
  - Monitoring
  - Evaluation

### The Policy Delivery Cycle - where statistics can impact

- Monitoring performance indicators and expected benefits
- Evaluation and reporting

- Undertake pilots & collect good practice
- Benchmark against other schemes
- Agree and put in place delivery arrangements with delivery partners and regulators
- Put in place policy monitoring, evaluation & reporting mechanisms

# Focusing on the impact of statistics

**Assessment** of the situation in order to identify the best areas for action/intervention

**Monitoring** provides headline data on policy performance What happens as a result of the policy?

**Evaluation** provides an *understanding* of what is happening / happened in practice and why and what can be done about it

# Benefits of Energy Data compilation

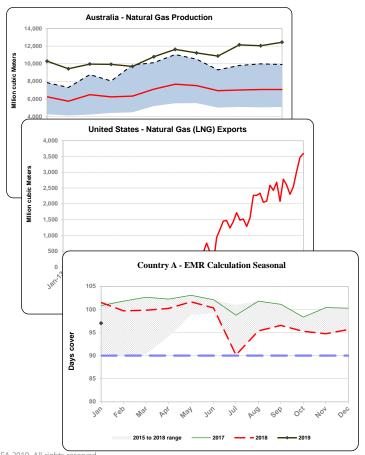

- Take stock of the situation to start from realistic base
- Understand what happens as a result of the policy
  - how do energy consumers react
- Government accountable for use of money
- Ability to change policy during its implementation
- Learn for other policies
- Broader benefit in widespread understanding of energy

Energy statistics are the basis for any sound energy policy.
Reliable statistics are not built overnight

# Focus of Short term energy data collection (IEA example)

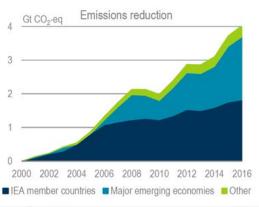

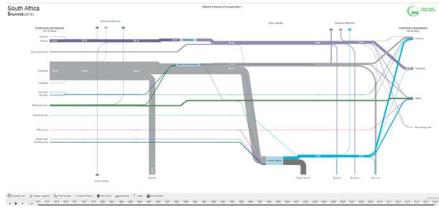

- Preliminary source of information
- Early visibility of changing trends
- Ouick assessment of the markets
- Transparency in the markets
- Monitoring of a country's ability to face a disruption
- Foster regular communication between industry and administrations

# Focus of Long term energy data collection (IEA example)

- Detailed analysis of energy matrix in a country
- Identification of focus areas for policy development and implementation
- Ability to set and track energy targets made through policy
- Monitor implementation of policies
- Build a robust information system
- Remain adaptable to longer term expected changes

### Examples of policy areas with great visibility for energy statistics

☐ IEA Member countries have an obligation to hold 90 days of stocks (net imports/consumption)

- Need reliable and timely data on imports, consumption and stocks
- □EU Member countries: obligation to have a minimum share of electricity consumption coming from renewables
  - Need reliable data on renewables.
- Annex 1 countries to the Conference of Parties: respect of the engagement they have ratified when signing the Kyoto Protocol (70% to 80% of GHG come from fuel combustion)
  - Need reliable data on both supply and demand
