

In the most recent Participation Assessment^[1] covering the second half of 2025, countries earning a “Good” rating for “Sustainability” declined to 52% of all participants. The number of countries earning a “Good” rating for “Timeliness” was stable at 39% and “Completeness” declined to 44%. Compared to the previous reporting period the sustainability went down by 5, and completeness by 3 percentage points. IEF and JODI Partners will sustain and intensify outreach efforts to re-engage non-submitting member countries, while further strengthening members’ commitment and participation in JODI reporting. Coordinated cooperation among JODI partners, participating countries and relevant stakeholders is essential for enhancing the quality, timeliness, and completeness of global energy data transparency.

Number of Countries/Economies Earning “Good” or 😊 Ratings

	July-December 2025	January-June 2025	July-December 2024	January-June 2024
Sustainability	61	66	72	61
Timeliness	46	46	47	43
Completeness	52	55	56	55

JODI-Oil remains work in progress in which improvement comes with dedication and persistence. Ongoing challenges relate to sustainability and incomplete or missing data for certain countries and economies. These constraints do not affect the benchmark function of JODI but limit JODI-Oil’s ability to provide a fully representative summary of the market. Another challenge is improving the timeliness of JODI-Oil submissions. Some national administrations do not submit JODI-Oil questionnaires until they have data for all relevant fields, which negatively impacts their timeliness assessment. The JODI Partners are striving to encourage these economies to submit partial data when it becomes available, and then to subsequently submit complete questionnaires. Calls for more complete questionnaires and for the submission of partial ones as soon as data become available may seem contradictory but given that digitalization is streamlining data collection processes and influencing how timeliness is assessed, the two are in fact complementary.

Adequate support for data transparency also represents a challenge, as the success of JODI requires sustained commitment at all levels: from Leaders and Ministers to statisticians who work directly with energy data. It is imperative that top-level political commitment reinforces JODI’s role and continues to guide and motivate hands on actors working to collect and analyze JODI data, and vice versa. Resource constraints also continue to place limitations on staff working with JODI and data transparency more broadly.

A Glossary of the JODI-Oil Participation Assessment Definitions: Sustainability, Timeliness and Completeness

Sustainability measures the number of JODI-Oil questionnaires received within a given time-period (six months). Sustainability assessments for each participating country or economy are based on the number of JODI-Oil questionnaires received by the submission deadline for the reference assessment period. A Good rating, or smiley face, is earned when a country or economy submits JODI data for all six months.

Timeliness evaluates whether data were submitted at or before the expected deadline. A smiley face is awarded when all six submissions were received within two months of the end of the reference month (or within 40 days for IEA/OECD countries).

Completeness tracks the number of data points submitted out of the maximum of 42 in the JODI questionnaire. To earn a smiley face, each country or economy must submit more than 90% of its data related to production, demand and stock changes.

[1] The most recent assessment, which covers the period from July through December 2025, is featured on the back of this document. It is also available at www.jodidata.org
