7th Regional JODI Training Workshop

8-10 October 2012, Rabat, Morocco

JODI World Database Data Quality Assessment Files

Presented by Ms. Liliana Suchodolska (IEA)

JODI World Database Data Quality Assessment files

- Using data from the published JODI World Database:
 - Quick view of data presence for
 - Each data month
 - Each products/flow combination for each data month
 - Facilitate viewing/checking of data quality
 - See the effect of changes to data (revisions)
 - Data quality checks
 - Time Series view of data

Data Presence Evaluation – per data month

Below the graphs: tables with the values and year on year growth rates. Remove the "#N/A" (not available) value so that it is not counted as a data point.

In this example, are we looking at a change in methodology of reporting of stocks? If so, the Metadata in the IVT table should mention it.

Possibility to see the effect of changes to data

JODI - Example Country 3 - Crude Oil - Closing Stocks National Territory

You can modify a value in the table and refresh the graph.

This does not revise the source data

Revisions to JODI have to be submitted to your reporting organization in the JODI format

Motor Gasoline (incl. aviation gasoline)

- Interactive product selection
- Highlight values where reported stock change is different than calculated stock change
- Color highlight of values indicating opposite stock level movements

If stock changes reported are correct, maybe closing stock levels of previous month need to be revised by the country

Data Quality Checks - Internal consistency

Fuel Balance
 Reported Total Product figures should be greater than or equal to the sum of the elements

Total Products >= LPG

Of which Jet Kerosene should be less or equal to Total Kerosene

- + Naphtha
- + Gasoline
- + Total Kerosene
- + Gas Diesel Oil
- + Fuel Oil
- + Other Products

Internal Consistency – Fuel Balance

JODI - Example Country 5 - Data Quality Checks

3 Internal Consistency check - Fuel Balance Sum of elements vs. reported Total Products

			LPG + Gasoline + Kerosene + Gas Diesel Oil + Fuel Oil

Highlight values where reported Total Product value is less than the sum of the elements:

LPG

- + Naphtha
- + Gasoline
- + Total Kerosene
- + Gas Diesel Oil
- + Fuel Oil
- + Other Products

Submitting country should verify that data for each product and for total products are correct

Data Quality Checks - Internal consistency

Other Products

The original JODI did not include a column for Other Products, but these can be calculated based on the reported figure for the individual products

Other Products = Total Products

- LPG
- Naphtha
- Gasoline
- Total Kerosene
- Gas Diesel Oil
- Fuel Oil
- Are calculated Other Products negative?
- Do calculated Other Products represent a reasonable percentage of Total Products?

Internal Consistency – Other Products

25%

JODI - Example Country 6 - Data Quality Checks

4 Internal Consistency check - % Other Products Total Products - (Sum of elements)

		Total - sum(LPG + Gasoline + Kerosene + Gas Diesel Oil + Fuel Oil)

Interactive flow selection

- Modifiable acceptance level for Other Products percentage of Total **Products**
- Highlight values where calculated other products are negative
- Color highlight of values where percentage of Other Products as part of Total Products is above an acceptable range
- Submitting country should verify that data for each product and for total products are correct
- Acceptance level of comparability for this check depends on the country

Data Quality Checks – Refinery Yield

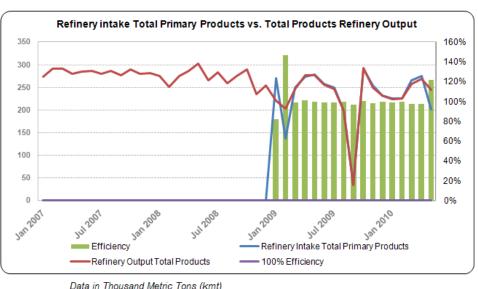

Refinery Yield

- Refinery Yield is the refinery output of total products compared to the total refinery intake.
- In the original JODI questionnaire only Crude Oil refinery intake was requested and therefore this check is not very meaningful.
- This check is included in the JODI DQA B2020 file only as an attempt to spot potential changes in reporting methodology.
- This check should give more meaningful results when evaluating data reported in the JODI Extended format.

Refinery Yield

JODI - Example Country 6 - Refinery Efficiency

Data in Thousand Metric Tons (kmt)

5% Acceptable level of refinery efficiency different than 100%

JODI - E	xample Country 6 - Refinery Ef	ficiency											
		Jan	Feb	Mar	Apr	May	Jun	Jul	Aug	Sep	Oct	Nov	Dec
2008	Refinery Intake Total Primary Products	0	0	0	0	0	0	0	0	0	0	0	0
	Refinery Output Total Products	275	251	276	287	303	266	283	259	276	289	235	255

2009	Refinery Intake Total Primary Products	270	138	250	274	278	258	250	199	36	291	254	232
	Refinery Output Total Products	221	203	247	277	277	256	247	198	35	293	250	232
	Efficiency	82%	147%	99%	101%	100%	99%	99%	99%	97%	101%	98%	100%
2010	Refinery Intake Total Primary Products	226	226	265	275	201	0	0	0	0	0	0	0
	Refinery Output Total Products	224	226	258	269	245	0	0	0	0	0	0	0
	Efficiency	99%	100%	97%	98%	122%							

- Modifiable acceptance level of refinery yield from 100%
- Highlight values outside the acceptable range in red
- This example is for Extended JODI format with full data beginning in 2009

Using the JODI Data Quality Assessment Files

- JODI Extended DQA B2020.xls to be used with newly prepared IVT tables: World primary.ivt and World Secondary.ivt
- Excel security settings should <u>allow for macros</u> to run.
- Data pages to be filled in from different IVT tables (next slide for details on each version).

- Data page is Full_B2020
- Set the data on the JODI world IVT (world.ivt):
 - Display data for a maximum of 8 years
 (e.g. to view data up to 2010, select and hide columns corresponding to 2002 data)
 - Country dimension should be in the top left corner
 - Unit dimension should be in the top left corner to the right of country dimension
 (Note that barrels per day unit selection would not include stock level data.
 Use tons, barrels, or liters data)
 - Nest product and flow dimensions as rows
 - Select the full data set and perform a copy paste to the data page in excel Full_B2020

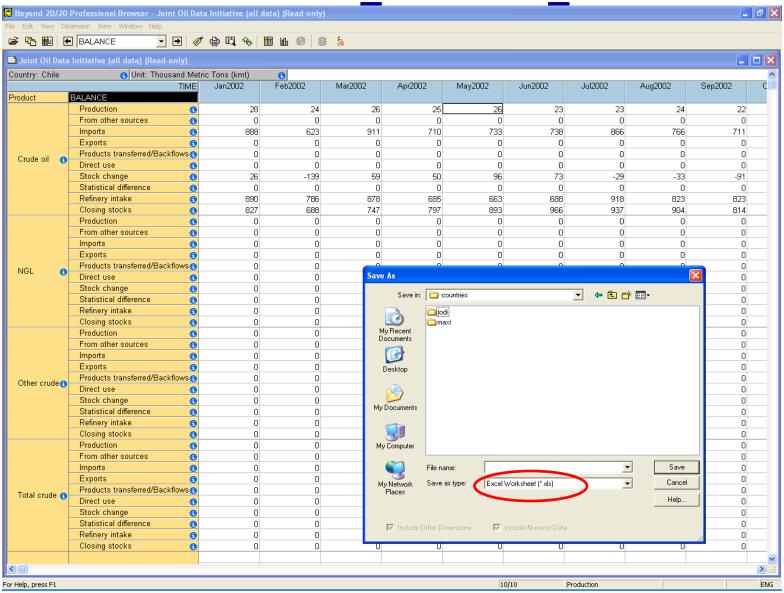

This is a correct setting of the view in Beyond 20/20

- Data sources:
 - World_primary.ivt
 - World_secondary.ivt
- Data pages in excel file are:
 - B2020_primary
 - B2020_secondary
- Due to the high number of data points:
 - IVT file will have to be saved first as an excel file
 - Then perform an import or copy/paste values to the excel template

- Set the data on the IVT files:
 - Display data for a maximum of 9 years (e.g. to view data up to 2012, data should begin with January 2004, no modification needed to current file)
 - Country dimension should be on the top left
 - Unit dimension should be in the top left corner to the right of country dimension
 (Note that barrels per day unit selection would not include stock level data. Use tons, barrels, or liters data)
 - Put product and flow dimensions as rows
 - Save the view of both IVT files in excel in a temporary location

- From excel open the files saved in the step before
- Select the full page from the temporary excel file saved with world_primary data and paste values to the data page in excel **B2020_primary**(note that paste value eliminates footnotes attached to the data that increase the size of the file unnecessarily)
- Select the full page from the temporary excel file saved with world_secondary data and paste values to the data page in excel B2020_secondary

Classwork and Homework:

•Prepare the file for your country using the template provided and the corresponding IVT files

•For the JODI_Extended_DQA_B2020.xls (using World_primary.ivt and World_secondary.ivt)

Identify the areas that present data quality issues.

Evaluate the need to resubmit data for the particular months.

Thank you
